## ***Notification of Test Results***

**04 July 1994**

This notice documents the results of an Air Force CALS Test Bed (AFCTB) Quick Short Test Report (QSTR) evaluation of data submitted by:

### **Northrop Corporation**

Identified as follows:

Title:	Technical Publication Transfer
Program:	B-2
Program Office:	ASC/YSSA
Contract No.:	F33567-81-C-0067/0051
QSTR No.:	AFCTB-ID 94-094

Received on the following media:      **Two 9-Track Tapes**

The results of the QSTR evaluation are as follows:

MIL-STD-1840A Standard	Pass
MIL-STD-1840A Media Format:	Pass
MIL-D-28000A IGES:	Pass
MIL-M-28001B SGML:	Pass
MIL-R-28002A Raster:	Pass
MIL-D-28003 CGM:	Pass

Formal results with associated disclaimer are documented and available from the AFCTB.

## 1. Introduction

### 1.1 Background

The Department of Defense (DoD) Air Force Continuous Acquisition and Life-cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

## 1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Northrop Corporation's interpretation and use of the CALS standards in transferring technical publication data. Northrop used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on two 9-track magnetic tapes.

## 2. Test Parameters

**Test Plan:** AFCTB 94-094

**Date of  
Evaluation:** 04 July 1994

**Evaluator:** George Elwood  
Air Force CALS Test Bed  
DET 2 HQ ESC/AV-2P  
4027 Colonel Glenn Hwy  
Suite 300  
Dayton OH 45431-1672

**Data  
Originator:** J.P. Kent

### 3. 1840A Analysis

#### 3.1 External Packaging

The tapes arrived at the Air Force CALS Test Bed (AFCTB) enclosed in boxes in accordance with ASTM D 3951. The exterior of the boxes were marked with a magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tapes were enclosed in barrier bags as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reels showed the label indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the boxes were packing lists showing all files recorded on the tapes.

#### 3.2 Transmission Envelope

The 9-track tapes received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

##### 3.2.1 Tape Formats

Both tapes were tested using the AFCTN *Tapetool v1.2.10* utility. No errors were encountered while evaluating the contents of the tape labels.

The tapes were read using XSoft's *CAPS read1840A* utility without any reported errors.

The submitted tapes meet the requirements defined in ANSI X3.27 and MIL-STD-1840A for physical structure.

##### 3.2.2 Declaration and Header Fields

No errors were found in the Document Declaration files or data file headers. These portions of the tapes meet the requirements defined in MIL-STD-1840A for CALS headers.

#### 4. IGES Analysis

The AFCTB has several tools for viewing IGES files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The tapes contained one IGES file. This file was evaluated using IDA's **parser/verifier** set for CALS Class I. This utility reported no CALS errors. The start sections contained the required conformance statement.

The file was converted using a utility available within the AFCTB, with no reported errors. The resulting file was read into Island Software's **IslandDraw**, displayed and printed without a reported error. It was noted that the file displayed on the left side of the screen. The remainder of the file was located off the page to the left. The origin point of this file was found to be a negative value (X -3.13; Y- .86). An undocumented feature of the translator was used to create a complete image.

The file was converted using Auto-trol's **Sk5post** utility without a reported error. The resulting file, when displayed, appeared to be complete.

The file was converted using Cadkey's **ig2c** utility. The resulting file was read into Cadkey's **Cadkey**, displayed and printed. No errors were noted.

The file was read into Carberry's **CADLeaf** software without a reported error. The file displayed in the lower left corner of the screen. When the Bound Data option was used during the import, a complete image was displayed and printed.

The file was read using IDA's **IGESView**, **IGESView for Windows**, and **CALSVIEW**. No errors were noted.

The file was read using ITI's **IGESWorks** without a reported error. The files were displayed and printed.

The IGES file was converted using Rosetta Technologies' **Prepare** with a reported warning for level of precision. The

resulting file was read into Rosetta Technologies' **Preview**, displayed and printed.

The IGES file meets the CALS MIL-D-28000A, Amendment One, specification.

## 5. SGML Analysis

The AFCTB has several parsers available for evaluating submitted DTD and text files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. These products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings unless specified in the report. Changes to DTD or text files required by each system are not documented in the report.

The two tapes contained two DTDs, two text, and two Format Output Specification Instance (FOSI) files.

The first tape contained a DTD which consisted of token references. The tape was analyzed as described in the following paragraphs.

The text and DTD files tape were evaluated using a parser available within the AFCTB. No errors or warnings were issued during the parsing of these files. It was necessary to increase the GRPCNT parameter in order to complete the parsing operation.

The text and DTD files were evaluated using the Exoterica **XGMLNormalizer** parser. This parser reported no errors or warnings.

The text and DTD files were tested using the Exoterica **Validator ex1** parser. The following warning was issued by this tool:

```
<!-- **Warning** in "i:\94094\ta01.txt", line 1:
  There is no element with an IDREF or IDREFS attribute value equal to
  a specified ID value.
  The unreferenced ID attribute value is "X0".
-->
```

---

The text and DTD files were evaluated using McAfee & McAdam's **Sema Mark-it v2.3** parser. No errors or warnings were issued by this tool.

The text and DTD files were evaluated using the Public Domain **sgmls** parser. No errors or warnings were issued by this utility. It was necessary to increase the GPPCNT parameter in order to complete the parsing operation.

The second tape contained a "normal" DTD with a text file that referenced the included graphics files. It was analyzed as described in the following paragraphs.

The text and DTD files were evaluated using a parser available within the AFCTB. No errors or warnings were issued during the parsing process.

The text and DTD files were evaluated using the Exoterica **XGMLNormalizer** parser. This parser reported no errors and three warnings. The warnings were mixed content models for elements "ENTRY", "NOTICE" and "RESULT".

The text and DTD files were tested using the Exoterica **Validator ex1** parser. Four warnings were issued by this tool for mixed content models.

The text and DTD files were evaluated using McAfee & McAdam's **Sema Mark-it v2.3** parser. No errors or warnings were issued by this tool.

The text and DTD files were evaluated using the Public Domain **sgmls** parser. No errors or warnings were issued by this utility.

The DTD and text files were imported into a software available within the AFCTB. The DTD was parsed and generated three mixed content model warnings. Because the FOSI file could not be imported nothing was published.

No errors were reported in any of the DTD or text files from either tape. The files meet the CALS MIL-M-28001A specification.

## 6. Raster Analysis

The AFCTB has several tools for viewing Raster files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The tapes contained one Raster file. This file was evaluated using the AFCTN **validg4** utility. This program reported that the file meets the CALS MIL-R-28002A specification.

The file was read into the AFCTN **xrastb.sun4** viewing utility. No problems were noted.

The file was converted using a utility available within the AFCTB, without a reported error. The resulting file was read into Island Software's **IslandPaint** and displayed.

The Raster file was read into Carberry's **CADLeaf** software without a reported error. The image was displayed with no noted errors.

The file was read using IDA's **CALSVIEW** without a reported error.

The file was read into IDA's **IGESView** and **IGESView for Windows** without a reported error and displayed.

The file was read into and displayed using Inset Systems' **HiJaak for Windows** without a reported error.

The Raster file was converted using Rosetta Technologies' **Prepare** without a reported error. The resulting file was read into Rosetta Technologies' **Preview** and displayed.

The Raster file was imported into Expert Graphics' **RxHighlight** and displayed without a reported error.

The Raster file meets the CALS MIL-R-28002A specification.

---

## 7. CGM Analysis

The tapes contained one CGM file. The file was evaluated using ATC's **MetaCheck** with CALS options. This utility reported no errors in the file.

The CGM file was evaluated using the beta AFCTN **validcgm** utility, with reported errors.

The AFCTB has several tools for viewing CGM files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The CGM file was converted using a utility available within the AFCTB, without a reported error. The resulting file was read into Island Software's **IslandDraw v3.1**, displayed and printed. File C002 contained text overflow.

The CGM file was converted using Auto-trol's **sk5cgm** utility without a reported error. When the resulting file was displayed, it appeared as a solid mass of color and lines.

The file was read into Carberry's **CADLeaf** software and displayed. File C002 contained text overflow. When the proportional font option was selected, most text was displayed within the defined boundaries. However, in two blocks the text still overflowed into the next block.

The file was read into IDA's **CALSVIEW**. File C002 contained text overflow in many blocks along with the restricted text block.

An attempt to import the file into ATC's **ForView** caused a General Protection error message.

An attempt to import the file into Lotus' **Freelance** caused a General Protection error message.

The file was imported into SPC's **Harvard Graphics v3.05** with reported errors. The errors were line style errors, indi-

vidual points adjusted so they will appear on the screen, non-CGM object encountered, and objects not translated. The resulting image was not usable.

When an attempt was made to read into Inset Systems' **HiJaak Pro**, the file generated a Real Precision Not Supported error message.

The file was imported directly into Island Software's **IslandDraw v4.0** without a reported error. Text overflow in the restricted text block, and errors in the Elliptical arc blocks were noted.

An attempt to imported the files into Corel's **Ventura Publisher** resulted in errors reported. Nothing was displayed.

The CGM file meets the CALS MIL-D-28003 specification. However, none of the PC based software, available within the AFCTB, was able to successfully read the file. None of the applications displayed a completely correct image. This is because the PC-based software products used in this test do not support the high precision levels (16 digit) required by the submitted CGM file.

## 8. Conclusions and Recommendations

The tape could be read properly using the AFCTN **Tapetool** software without any reported errors or warnings. The physical structure and CALS headers were correct, and this portion of the tape meets the CALS MIL-STD-1840A and ANSI X3.27 requirements.

The IGES file meets the CALS MIL-D-28000A specification.

The SGML files meet the CALS MIL-M-28001A specification.

The Raster file meets the CALS MIL-R-28002A specification.

The CGM file meets the CALS MIL-D-28003 specification. However, most of the software tools, available within the AFCTB, could not correctly display the images.

The tape submitted by Northrop Corporation meets the CALS MIL-STD-1840A requirements.

\*\*\*\*\* Entity Validation \*\*\*\*\*

\*\*\* Warning (IEVM\_BAD\_COORD\_VALUE) \*\*\*  
(DE 23, TF 106:11) This independent or logically dependent entity had a coordinate value of -3.0019276e+00, which is beyond the maximum coordinate value set in the Global section (at Index 20) of the IGES file. The maximum coordinate value allowed is 2.8626218e+00.

<<<< PART OF LOG FILE REMOVED HERE >>>>

Entity Validation Summary:

Type	Form	Entity Count	Number Valid	Number of Corrected		Number of Uncorrected	
				Warnings	Errors	Warnings	Errors
Global Section		1	1	0	0	0	0
106	11	24	18	0	0	14	0
106	63	8	8	0	0	0	0
110	0	6	5	0	0	2	0
404	0	1	1	0	0	0	0
406	16	1	1	0	0	0	0
410	0	1	1	0	0	0	0
Totals:		42	35	0	0	16	0

The following message was issued and suppressed 11 times:

This independent or logically dependent entity had a coordinate value of %.7e, which is beyond the maximum coordinate value set in the Global section (at Index 20) of the IGES file. The maximum coordinate value allowed is %.7e.

A message is suppressed when it has been issued more than 5 times. This value is controlled by the 'MAX\_MESSAGE' configuration parameter.
